Retail & Wholesale

Rappit platform for AI-led application development + services

Privately held, family owned

Founded in **2009** by IT veteran Jan Baan

Offices in Netherlands (HQ), India (Development center), France & Germany

45+ years of experience in Enterprise IT

320+ team

Legacy enterprise systems are today's reality

McKinsey
& Company

70%

of Fortune 500 software is **20+ years old**

accenture

72%

of executives say that their legacy systems are **holding them back**

FORRESTER

>50%

of enterprises say legacy IT **slows down AI efforts**

McKinsey
& Company

>40%

acceleration in technology modernization timelines **enabled by AI**

AI is
transforming
companies
and *industries*
around the
world.

Data
needs AI

AI needs
data

What's **stopping you** from achieving an AI-driven transformation?

Legacy and data constraints

Siloed, aging, fragmented systems and data

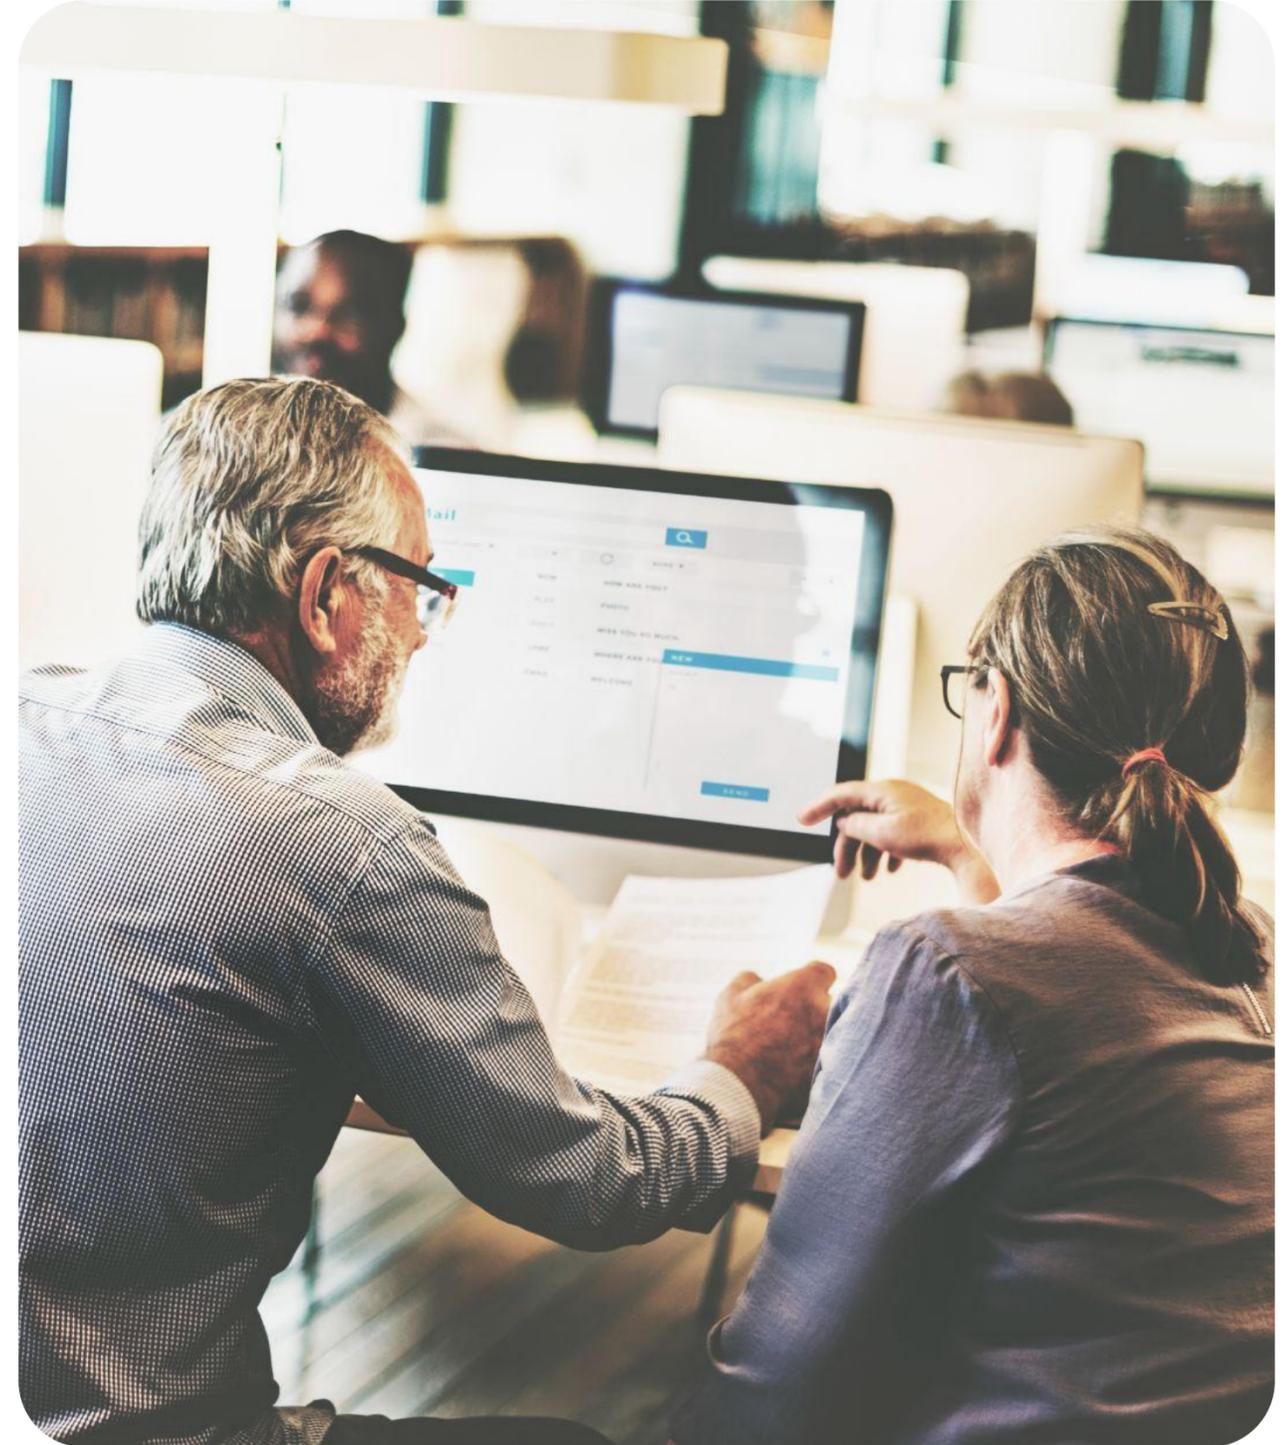

Innovation and cost bottlenecks

Hesitation to make investment, limited by existing budget

Risks

Perceived complexity and risk involved in rebuilding legacy systems

Avoiding legacy system modernization **blocks growth**

Organizations remain trapped by legacy systems, posing significant obstacles:

Compromised business agility

Legacy applications slow organizations' ability to adapt to market changes.

Increased operational costs

Outdated apps drain budgets with high licensing, support and hosting costs.

Crippling tech debt

Non-standard technology and low resiliency in legacy applications drive up costs and cause frequent outages.

Reduced productivity

Using legacy applications lowers productivity and makes talent retention harder.

However, rebuilding a differentiating custom enterprise application **takes time**

Understanding intent

No documentation of system available. A bit of a “black box”

Requirements

Defining requirements for new system (“discovery process”) takes a long time

Transformation

Modernize what matters, reimagine with new, innovative ways

Business leader

“How can we move faster. My current system is slowing us down. My competitors are getting ahead with innovative stuff!”

IT leader

“I don’t want to rebuild the old, but I also don’t want to start from scratch. As the current system captures some of our business’ unique processes”

What if there is a **smarter way** to rebuild
and reimagine your legacy enterprise
application **with AI?**

Rappit offers solution development services + platform

rappit
platform

AI-led application development platform for core systems

Adaptable AI solutions

Undoc
Intelligent doc processing

Knowledge Agent

Recommender Agent

Partner with **solution development experts** - our proven process from vision to value

Discover

- Understand your vision and goals
- Aligned expectations

Design

- Create a road to success
- Reduce risk and uncertainty

Develop & deliver

- High-quality delivery
- Bring your vision to life

Maintain & adapt

- Ensure reliability and adapt to evolving needs
- Future ready and reliable

Why Rappit: deliver outperformance with **future-ready software**

4x

Faster Time-to-Value

AI-led platform enabling >4 times faster development than (AI-assisted) traditional methods.

Application modernization reimagined

De-risk & reimagine your legacy system modernization projects. Business and IT collaboration.

0

No vendor lock-in

No restrictions - completely open software, and code generation. You own the code, deployed on our environment.

100%

Forever Young code

Prevent legacy from happening again. Ensuring your systems stay agile, secure & up-to-date - always.

Real-world **customer** use case examples

Core systems

Build fully custom systems, that support your entire operations

Examples

- Custom ERP
- Custom TMS
- Custom WMS
- Custom OMS
- Custom CRM

HOYER
GROUP

NewPort

Business applications

Develop line-of-business applications and extend your (core) systems

Examples

- Project planning application
- Pricing configurator
- Work order management application
- Store management application
- B2B portal

Valeo

SOLVAY

eijerkamp.

AI agents & solutions

Automate processes and improve EX and CX, integrated in your systems

Examples

- AI Stylist (recommender agent)
- AI Tutor (knowledge agent)
- AI Technician (knowledge agent)
- Intelligent document processing (IDP) for logistics documents
- IDP for price and product documents

What if... you want your legacy application to be its **most beautiful self**?

...the Rappit way: modernizing a business-critical **legacy enterprise application** for 850 stores. Allowing them to realize an **ROI within 1 year**. Enabled by Rappit Developer's **3x more economical development**.

Benefits:

- **3x more economical development** (cost and time) versus traditional **low-code** platforms or manual coding.
- **ROI of <1 year**, and 25% more efficient, due to intuitive UI, new functionality and cloud-native set-up.
- **Enabled for data & analytics**, supporting Hunkemöller's **data-driven** retail experience.
- **Fast application rebuild:** full application delivered in <3 months.

hunkemöller

- **1886 founded**
- **22 countries**
- **850 stores**
